## DEPARTMENT OF DEFENSE

### HANDBOOK FOR MOBILE ELECTRIC POWER ENGINE GENERATOR STANDARD FAMILY GENERAL CHARACTERISTICS

MIL-STD-633E  
22 February 1980

DEPARTMENT OF DEFENSE  
Washington, DC 20301

MOBILE ELECTRIC POWER ENGINE GENERATOR STANDARD FAMILY  
GENERAL CHARACTERISTICS

1. This Military Standard is mandatory for use by all Departments and Agencies of the Department of Defense.

2. Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Commander, U.S. Army Mobility Equipment Research and Development Command, ATTN: DRDME-DS, Fort Belvoir, Virginia 22060, with a copy to DOD Project Manager- Mobile Electric Power, DRCPM-MEP-T, 7500 Backlick Road, Springfield, Virginia 22150, by using the self-addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

MIL-STD-633E  
22 February 1980

## FOREWORD

Preparation of this document has been authorized by the Department of Defense Directive 4120.11 which assigns to the Project Manager, Mobile Electric Power the responsibility for establishing a Military Standard depicting the Department of Defense (DOD) Family of Mobile Electric Power Generating Sources. Military Standard 633E combines MIL-STD-633D and MIL-STD-1650 and revises the Family by the deletion of four items (MEP-111A, MEP-352A(NC-2A), MEP-355A(NC-8A) and MEP-403A(EMU29)), the addition of two items (MEP-029A and MEP-412A), and the replacement of five A models by three B models (MEP-009B, MEP-009B, and MEP-116B) for future procurement. MEP-356A is assigned to the Air Force A/M32A-60A Ground Support Power Unit and MEP-357A is assigned to the Navy NC-10C Ground Support Power Unit.

The following are extracts from DOD Directive 4120.11:

### "IV. POLICIES

- A. Maximum use will be made of the established DOD Standard Family of Mobile Electric Power Generating Sources to satisfy military applications with a minimum number of sizes and types in the interest of standardization, availability, interchangeability of parts, maintainability, and reduction of required logistical support.
- B. In designing and developing end items and systems requiring electric power from mobile electric power generating sources, DOD Components will consider the characteristics and suitability of the DOD Standard Family of Mobile Electric Power Generating Sources defined in the current series of Military Standards. (MIL-STD'S 633 and 1332).
- c. Where mobile electric power generating sources are designed in and procured as an integral part of an end item or system, the System/Project Manager and/or Design Activity shall use the current DOD Standard Mobile Electric Power Generating Sources (MIL-STD-633) to the extent practicable, unless special requirements exist, in which case, the procedures outlined in VI, for deviations shall apply.

### VI . DEVIATIONS

DOD Components requiring mobile electric power generating sources other than those available in the standard family and/or covered by or requiring the maintenance of limited coordination specifications or other uncoordinated procurement documents, will so advise and obtain approval from the Project Manager - Mobile Electric Power (PM-MEP) prior to initiating procurement. The Project Manager will expedite action on such requests."

DOD Instruction 4120.12 establishes the fuels policy for engine driven Mobile Electric Power Generating Sources. This policy is reflected in the Fuel Section of the Characteristics Data Sheets.

22 February 1980

1. SCOPE

1.1 General. This standard provides detailed information on the physical and electrical characteristics and logistical data on the DOD approved family of mobile electric power engine-driven generator sets.

1.2 Application. The standard has been prepared for use by all Departments and Agencies of the DOD in selecting engine-driven generator sets and ancillary equipment for applications requiring mobile sources of electric power and to assist the PM-MEP in effecting management and standardization of such sources of power within the DOD. The engine-driven generator sets listed herein are the only mobile sets authorized for procurement. DOD components with mobile electric power requirements within the range of 0.5 kW through 750 kW, whose needs cannot be satisfied by one of the listed generator sets, must obtain deviation approval of the Project Manager before taking any procurement action. Special instructions on the preparation and submittal of deviations are contained in the Logistics Joint Operating Procedures AR 700-101, AFR 400-50, NAVMATINST 4120.100A, MCO 11310.8c and DLAR 4120.7 titled Management and Standardization of Mobile Electric Power Generating Sources.

MIL-STD-633E

MIL-STD-633E

22 February 1980

### 3. DEFINITIONS.

3.1 Bandwidth. Bandwidth is the distance between two lines drawn parallel to the axis of chart movement, one each passing through the center points of maximum and minimum trace excursion respectively during any steady-state electrical load condition. Bandwidth may refer to voltage, frequency or speed and is expressed as a percentage of rated voltage, frequency or speed.

3.2 Classification. See MIL-STD-1332 for classification of sets as to type, class, and mode.

3.3 Deviation Factor. The deviation factor of a wave is the ratio of the maximum difference between corresponding ordinates of the wave and of the equivalent sine wave to the maximum ordinate of the equivalent sine wave when the waves are superposed in such a way as to make this maximum difference as small as possible.

3.4 Dip. Voltage dip is the decrease in voltage resulting from sudden application of load to a generator set. It is measured from the mean of the observed steady-state voltage band prior to the load change to the minimum voltage excursion. Voltage dip includes the effects of voltage regulation, whereas undershoot does not.

3.5 Failure. The inability of an item to perform within previously specified limits.

3.5.1 Relevant Failure. A relevant failure is any malfunction which the operator cannot remedy by normal adjustment action using the set controls and OEM equipment and which causes or may cause any or all of the following: Inability to commence operation, cessation of operation or degradation of performance capability of the system/subsystem below designated levels, serious damage to system/subsystem by continued operation; or create serious personnel hazard.

3.5.2 Nonrelevant Failures. Any failure not used to compute set/unit reliability such as:

a. Failures which do not prevent the set/unit from meeting the specified power output requirement, e.g., a panel light burns out.

b. Failures caused by operator error where proper procedures are documented in technical manuals, instruction plates mounted on the set/unit or both; e.g., use of improper lubricant.

c. Secondary failures caused by failures in the powered equipment or other occurrences in the environment when integral protection is not provided against such equipment failure or occurrence, e.g., explosion or fire.

MIL-STD-633E  
22 February 1980

d. Failures which may be corrected by normal operator functions, e.g., readjustment of voltage after the 4-hour long-term stability period.

e. Failures because of characteristics of the load, e.g., waveform distortion caused by saturated inductors.

f. Failures because of design deficiencies when subsequent testing demonstrates that the design deficiency has been corrected.

g. Secondary failures caused by primary failure because of a design deficiency when subsequent testing demonstrates that the design deficiency has been corrected.

h. Failures resulting from operating items beyond requirements, e.g., if ball joints scheduled for replacement at 2500 hours are run to failure to determine mean life, failures after 2500 hours are nonrelevant failures.

3.6. Harmonic. A harmonic is a component of a periodic quantity which is an integral multiple of the fundamental frequency. For example, a component of frequency which is twice the fundamental frequency is called the second harmonic. For an AC generator set, the magnitudes (in percent of fundamental component amplitude) of any harmonics present may not exceed the "individual harmonic" value specified for the set.

3.7 Hertz. Hertz (Hz) is the international unit of frequency now recognized instead of cycles per second.

3.8 Mean Time Between Failure (MTBF). For exponentially distributed failures, the Mean Time Between Failure (MTBF) is the reciprocal of the failure rate. Observed MTBF is equal to the total operating time of the equipment divided by the number of relevant failures. Observed MTBF is also referred to as a point estimate.

3.8.1 Specified MTBF. That value of MTBF which describes the reliability objective of the equipment.

3.9 Mobile Electric Power Generating Sources. Mobile electric power generating sources include all mobile (skid, wheel-mounted or portable), diesel, gasoline, gas turbine, etc., powered engine-driven generator sets, including those that are components of a system which are complete operational equipment assemblages capable of independently producing electric power, or follow-on power sources such as: fuel cells, turbo-alternators and thermoelectric devices, except that electrochemical batteries, fuel cells and thermoelectric devices of less than 1/2 kW rating shall not be included. The fuel supply may be integral or remotely located.

MIL-STD-633E

22 February 1980

3.10 Observed Steady-State Band. The observed steady-state band is the actual bandwidth determined by test of the voltage, frequency or speed. The observed steady-state band is differentiated from the prescribed steady-state band in that the prescribed steady-state band is the maximum bandwidth permitted by the specification.

3.11 Overshoot. Overshoot is the surge increase in speed, frequency or voltage above the mean of the observed steady-state band resulting from a sudden decrease in electrical load on a generator set. Overshoot is specified as a percentage of the rated speed, frequency or voltage.

3.12 Prescribed Steady-State Band. The prescribed steady-state band is the bandwidth specified in the procurement document. See observed steady-state band also.

3.13 Phase Balance Voltage. Phase balance voltage is the difference in percent of voltage between the phases of a polyphase generator set when the set is operating at rated voltage, rated frequency, and no load.

3.14 Rated Load. The condition resulting when a generator set is operating at rated frequency, rated voltage, rated current, and rated power factor as specified on the generator name plate. It is normally stated as a given kilowatt value at a given power factor.

3.15 Reconnectable. A reconnectable generator set has provisions for reconnecting the generator phase windings from single phase to three phase and from low voltage to high voltage to voltage depending on the size and type of generator set.

3.16 Recovery Time. Recovery time is the elapsed time from the time the frequency trace leaves the prescribed steady-state band until the trace returns to and remains within the prescribed steady-state band as a result of a load change. The same definition applies to voltage and speed recovery time.

3.17 Regulation. Frequency regulation is the maximum difference between the no-load value of frequency, and the value at any load up to and including rated load. This difference is expressed as percentage of the rated frequency. The voltage regulation is expressed similarly except that the rms value of voltage is used.

3.18 Ripple Voltage. Ripple voltage is the alternating component in the output voltage of a DC generator.

3.19 Rise. Voltage rise is the surge in voltage resulting from sudden removal of load from a generator set. It is measured from the mean of the observed steady-state voltage band prior to the load change to maximum voltage excursion. Voltage rise includes the effects of voltage regulation, whereas overshoot does not.

3.20 Stability. Frequency stability describes the tendency of the frequency to remain at a constant value. Generally, the instantaneous value of frequency is not constant but varies randomly above and below a mean value. Stability may be described as either short-term or long term depending upon the length of time that the frequency is observed. Another term, bandwidth, describes the limits of these variations. Voltage stability is described similarly

3.21 Steady-State. Steady-state is the operating condition, at constant load, after transients have settled out.

3.22 Undershoot. Undershoot is the surge decrease in speed, frequency, or voltage below the mean of the observed steady-state band resulting from a sudden increase in electrical load on a generator set. Undershoot is specified as a percentage of the rated speed, frequency, or voltage.

3.23 Primary Inventory Control Activity (PICA). The military service designated under this program as the single activity within the DOD responsible for the function of Procurement, Cataloging, Depot Maintenance, and Disposal on an item basis.

3.24 Definition of Acronyms used in this Standard. The following acronyms used in this Standard are defined as follows:

- a. ABCA - American, British, Canadian, Australian Standard.
- b. NATO - North Atlantic Treaty Organization.
- c. STANAG - Standardization Agreement (NATO).
- d. QSTAG - Quadripartite Standardization Agreement (ABCA).
- e. DOD - Department of Defense.
- f. GED - Gasoline Engine-driven.
- g. DED - Diesel Engine-driven.
- h. GTED - Gas Turbine Engine-driven.
- i. NSN - National Stock Number.

MIL-STD-633E

22 February 1980

#### 4. GENERAL REQUIREMENTS

##### 4.1 Safety.

4.1.1 Grounding. The National Electric Code requires that generator sets operating at a terminal voltage in excess of 150 volts to ground, shall have the frame grounded with a maximum resistance to ground not to exceed 25 ohms (see Article 445-8 and 250-84 of referenced code). If a suitable ground is not available, a three-piece sectional ground rod is available in the DOD supply system that can be used to obtain an adequate ground under most soil conditions. (See 4.3.1)

4.1.2 Fire Protection. Adequate fire protection must be provided in the area in which the generator set will be used. If portable fire extinguishers are used to meet this requirement, they shall conform to NFPA No. 10 for class B (flammable liquids) and class C (hazards involving energized electrical equipment) . Three types of portable fire extinguishers are approved for class B and C hazards - carbon dioxide (CO<sub>2</sub>) dry chemical (sodium bicarbonate and potassium bicarbonate) and vaporizing liquid (bromotrifluoromethane). (See 4.3.1)

4.1.3 Noise Protection. Adequate hearing protection must be utilized in the vicinity of operating generator sets. Prolonged exposure to the high intensity noise produced by operating generator sets can cause permanent hearing damage or complete loss of hearing.

4.2 Fuel Policy. DOD Instruction 4120.12 establishes the fuels policy for engine driven mobile electric power generating sources. This policy is reflected in the Fuel Section of the Characteristics Data Dash Sheets.

4.3 Delivered Condition. Production generator sets are delivered from the factory essentially in the configuration depicted herein. Operating supplies, optional equipment, and accessories (see 4.4) should be obtained from the responsible DOD supply activity. The following data is furnished to facilitate users of this publication.

4.3.1 Safety Items. Production sets are delivered without fire extinguishers or ground rods; however, as 2-3/4 pound bromotrifluoromethane fire extinguisher is available. It is described by MIL-E-52031 and is identified as NSN 4210-00-555-8837. Ground rods are described by W-R-550A type III, class B. Three 3-foot-sections are identified as NSN 5975-00-878-3791. A ground rod puller is identified as NSN 5120-01-013-1676.

MIL-STD-633E  
22 February 1980

4.3.2 Batteries. All 5 kW through 750 kW generator sets are furnished with dry charged batteries less electrolyte. Electrolyte is identified as NSN 6810-00-249-9354 (1 gallon containers) or NSN 6810-00-893-8138 (15 gallon containers). MEP-404 (EMU 30) is available with either lead-acid or NICAD batteries.

4.3.3 Auxiliary Fuel Line. A 25 foot auxiliary fuel line is furnished with the 5 kW through 200 kW diesel engine driven generator sets. Fuel lines for the other sets may be ordered or fabricated on site in accordance with drawing 69-668 (30554).

4.3.4 Ether Starting Aid. The 15 kW through 200 kW diesel engine driven generator sets are equipped with an internal ether starting aid for temperatures below 40° F (4.4° C). Ether bottles may be obtained as NSN 2910-00-209-4997.

4.3.5 Parallel Operation. The 15 through 750 kW generator sets are designed for parallel operation as well as single set operation. Additional details on parallel operation are contained in the generator set manuals.

4.3.5.1 Paralleling Cables. Class 1 (precise) sets are supplied with a paralleling cable for interconnection of the voltage regulators and governor systems of the sets to be paralleled.

4.3.6 Power Output Terminals. Power output terminals consist of split-lug terminals with captive nuts. A series of standard power output receptacles (MIL-C-22992) are available through the supply system. The 15-200 kW DED generator sets have two (2) panels that the system designer can use for mounting the standard receptacles. In addition, the US Army Missile Command (MICOM) has cognizance for a series of missile system receptacles for the 15 kW through 60 kW DED generator sets.

4.3.7 Motor Starting Capability. The Class 1 (precise) 15-200 kW diesel engine-driven generator sets are capable of across-the-line starting of a motor rated at one horsepower per kW of set kW rating. The class 2 (utility) 15-200 kW diesel engine-driven generator sets are capable of across-the-line starting of a motor rated at one horsepower per 1-1/2 kW of set kW rating. The starting current rating of the motor is NEMA Code F and the motor being loaded with a flywheel having the inertia equal to that of the motor. Starting is defined as acceleration of the motor to rated speed without tripping any safety device.

4.4 Optional Equipment and Accessories. Description (nomenclature), National Stock Number, DOD Model numbers and other pertinent information are tabulated on the individual MIL-STD dash number sheets.

MIL-STD-633E

22 February 1980

#### 4.4.1 0.5-10 kW Gasoline Engine-Driven Generator Sets.

4.4.1.1 Canvas Cover. A canvas tarpaulin is available to protect the set when not in use.

4.4.1.2 Winterization Kit. The winterization kit permits the 3, 5, and 10 kW sets to start and operate at temperatures below -25° F. The kit consists of a nylon cover with a flame retardant coating. A heating torch is used in conjunction with the cover to preheat the oil pan and cylinder heads. The cover remains on the set during operation.

4.4.1.3 Spark Arrester Kit. US Forestry Service approved spark arresters are available for the sets. These kits are required when sets are operated within National Forests or Parks.

#### 4.4.2 5 and 10 kW Diesel Engine-Driven Generator Sets.

4.4.2.1 Winterization Kit. The kit consists of nylon cover with a flame retardant coating. The kit includes a frame that supports the cover while in use. Heat for preheating the engine and oil pan is obtained from a separate heater/battery box assembly. This assembly contains a fuel-fired hot air heater, fuel tank, batteries, and the necessary controls for proper operation of the kit. The cover remains on the set during operation.

4.4.2.2 Slave Receptacle Assemblies. Two slave receptacles are available for mounting on the set skid base. One assembly utilizes the Air Force peculiar three pin MS3506 receptacle while the other assembly utilizes the Army peculiar two pin MIL-C-62122 receptacle.

4.4.3 15-200 kW Diesel Engine-Driven Generator Sets. Technical manual TO 35CA-1-111/TM5-6115-588-14/NAFAC P-8-601/TM 6115-15/4 contains additional information on the winterization system kits, automatic transfer and standby kits, and the remote control box kit. Technical manuals describing each set also contain information on the load bank kit and wheel mounting kit as well as the winterization system kits.

4.4.3.1 Winterization System. A winterization system utilizes integral set features and components plus either or both of the two optional winterization kits which mount within the set. Optional fuel burning or the electric winterization kits provide the capability of preheating the coolant and lubricating oil in ambient temperatures to -650 F. Set operation is limited, however, if diesel fuel is stored at ambient since DF-A, diesel fuel-artic, has a cloud point of -60° F. External DC power must be used for starting the engine in ambient temperatures below -25° F. This may be obtained from either the auxiliary winterization kits or other slave batteries such as vehicle batteries.

MIL-STD-633E  
22 February 1980

The electric winterization kit is preferred for maintaining a set in standby condition when electric power is continuously available but fuel burning kits will bring a cold set to operable temperature faster and can be used when no electric power is available.

4.4.3.2 Optional Electric Winterization Kit. This kit uses an external power source to maintain the engine coolant and lubricating oil at normal operating temperatures in situations which require immediate starting of the generator set. With the kit installed, the set is capable of starting, accelerating to a speed and accepting 75 percent of rated load over the temperature range of -65° F to +125 within 20 seconds of start initiation. This assumes temperature stabilization of the set prior to starting. The kit may be installed on a generator set which has been equipped with a fuel burning winterization kit. Power for operation of this kit may be obtained from any 205 to 240 volt, 50/60 Hz or 400 Hz, single phase source. These kits use approximately 3.0 kW for 15, 30 and 60 kW sets, 2.5 kW for 100 kW sets and 4.0 kW for 200 kW sets.

4.4.3.3 Optional Fuel Burning Winterization Kit. The optional fuel burning winterization kit is used to preheat the engine coolant and lubricating oil burning fuel from the generator set fuel tank. If the generator set is equipped with an electric winterization kit, then extra components as listed in the electric winterization kit manual must be provided to accommodate both kits.

4.4.3.4 Auxiliary Electric Winterization Kit. The Auxiliary Electric Winterization Kit is utilized to provide a dependable external source of battery power for starting generator sets in ambient temperatures down to -65° F whenever electric power is available. The kit consists of an insulated container, electric heaters, batteries, battery charger, control circuitry, and slave cable. The heaters maintain the battery electrolyte at a minimum of +32° F after five hours of operation at -65° F. The battery charger maintains both the kit batteries and generator set batteries in a fully charged condition. Power requirement for kit operation is 1.2 kW at 205-240 volts, 50-400 Hz, single phase power.

4.4.3.5 Auxiliary Fuel Burning Winterization Kit. The fuel burning auxiliary winterization kit is utilized to provide a dependable external source of battery power for starting generator sets in ambient temperatures down to -65° F. The kit consists of an insulated container, batteries, hot-air fuel-burning heater, control box, battery charger, control circuitry, slave cable, and integral fuel system. The hot air heater will maintain the battery electrolyte at a minimum temperature of -25° F after one hour of operation at -65° F ambient temperature. The heater is designed to operate on the same fuels as the generator sets. The fuel tank has a sufficient capacity for a continuous operating period of 30 hours at -65° F. The internal kit battery charger can be

MIL-STD-633E

22 February 1980

used to recharge both the set batteries and the kit batteries from utility power or the generator set once it is operating.

4.4.3.6 Automatic Transfer Panel Kit, 50/60 Hz. This kit is used to automatically connect a standby generator set to the load in the event of primary power failure. The transfer panel continuously monitors the primary source and when the voltage or frequency decreases to a preset value, it will start the standby generator set, and transfer the load when the generator set frequency and voltage meet minimum requirements. The transfer will be break-before-make, thus there will be a momentary loss of voltage to the load. When primary power returns and meets minimum requirements for a predetermined time, the transfer panel will transfer the load back to the primary power source. After transfer of the load back to the primary power source, the standby generator set will run at no load for five minutes, shut down, and automatically cycle the generator set controls for standby operation. The transfer panel also permits starting of the standby generator set for a test run without disconnecting the load from the primary power source. If during the test run primary power should fail, the load will automatically be transferred to the standby generator set. The transfer panel is fully enclosed and may be wall or base mounted. It is designed for operation in ambient temperatures from +125° F to -65° F and provides power for the electric winterization kits which are required when using this kit to assure starting of the set within 20 seconds. Batteries of the standby generator set are maintained in a fully charged condition by the internal transfer panel battery charger.

4.4.3.7 Automatic Standby Panel Kit, 400 Hz. The automatic standby panel kit is utilized for transferring loads from an operating generator set to a generator set in standby status. When the operating generator set shuts down because of a fault, the standby set will automatically start, close the load contactor, and accept load. An adjustable timer permits setting of the standby generator set cranking time from 10 to 60 seconds. An internal battery charging circuit maintains the standby generator set batteries in a fully charged condition. This standby panel kit differs from the transfer panel kit in that it does not contain a power contactor and is operable only on 400 Hz generator sets.

4.4.3.8 Remote Control Box Kit. The remote control box kit permits starting and stopping of the generator set from a three wire remote station. When the generator set is started utilizing the remote control box, the set will come up to rated speed and the load contactor will close automatically. Use of the remote control box on a utility set requires the installation of the precise relay assembly to prevent the utility set from starting under load.

MIL-STD-633E  
22 February 1980

4.4.3.9 Load Bank Kit. A load bank kit consists of a balanced three phase, four wire, air cooled, resistive load and is used in conjunction with lightly loaded generator sets. The kit is used to load the set to approximately 50 percent of its rated load to prevent excessive engine carbonizing which occurs at loads less than 40 percent of rated set load. This parasitic load may be selected in increments of 12.5 percent of generator set rating at either 120/208 or 240/416 volts. The load bank also contains provisions for automatic load removal to prevent overloading of the set. Manual reapplication after automatic load removal is required. The kit mounts on either the top or front of the set depending on set rating.

4.4.3.10 Wheel Mounting Kit. The wheel mounting kits provide mobility in accordance with MIL-M-8090 (USAF), Type I, Class 2, Group C. This is adequate for movement over level terrain such as airfields, but mobility over rough terrain requires mounting on tactical trailers or other suitable vehicles. The kit consists of two wheel axle assemblies, one containing a towbar and safety chain and the other containing a mechanical parking brake.

4.4.3.11 Spark Arrester Kit. US Forestry Service approved spark arresters are available for the 15 and 30 kW sets. These kits are required when sets are operated within National Forests or Parks. The 60, 100, and 200 kW sets are not required to have spark arresters since the engines are turbocharged.

#### 4.4.4 500 kW Diesel Engine-Driven Generator Set, MEP-029A.

4.4.4.1 Housing Kit. The housing kit consists of a rainproof enclosure that covers the top, sides, and ends of the set and is removable to permit access for overhaul or replacement of major components. The housing includes doors, covers, and louvers to permit preventive maintenance and operation under specified environmental conditions. Unhoused operation is limited to temperatures above freezing. Use of the engine preheat system in conjunction with the housing kit extends set operation to  $-25^{\circ}$  F ( $-31.7^{\circ}$  C).

4.4.4.2 Set Control Module. The set control module, contained in a free-standing, weatherproof metal enclosure, provides for automatic operation of the generator set. The set control module is capable of sensing and, after an adjustable time delay of 4 to 10 seconds, initiating an unattended starting and transfer sequence when the normal 120 V AC utility supply voltage varies more than  $\pm 10$  percent and/or the frequency varies more than +3 percent. The set control module can be located at a distance of up to 100 feet from the generator set and contains provision to exercise the automatic sequencing circuitry. If two to six sets are required to support the load, both a paralleling control module and a set control module for each set is required for unattended starting and load transfer.

MIL-STD-633E

22 February 1980

4.4.4.3 Paralleling Control Module. The paralleling control module operates in conjunction with the set control module during unattended starting and load transfer when the load requires more than one set to support the load. One paralleling control module is required for each set that is to be operated in parallel. This is in addition to the set control module that is also required for each set. A maximum of six sets may be connected together for automatic sequencing. The paralleling control module is housed in a free-standing, weatherproof metal enclosure.

4.4.4.4. Remote Control Station. The remote control station will allow remote start and stop, monitor, and control of a single set and paralleling with like sets, from a remote location up to 1000 feet away.

4.4.4.5 Remote Control Cable. The remote control cable connects the remote control station to the generator set and includes a telephone line for communication purposes.

4.4.5 750 kW Diesel Engine-Driven Generator Set, MEP-208A. Optional equipment for the 750 kW diesel engine-driven generator set are the same as for the 500 kW diesel engine-driven generator set, MEP-029A (see paragraph 4.4.4) except that the MEP-208A is procured as a housed set and does not require a housing kit.

MIL-STD-633E  
22 February 1980

## 5. DETAILED REQUIREMENTS.

5.1 MIL-STD-Dash Number Sheets. Detailed data on DOD standard family engine generator sets are contained in the MIL-STD-633 dash number sheets. Identification numbering of these sheets consists of the basic MIL-STD-633 designator followed by a dash number for each generator set. See Table I for characteristics data sheet identification.

5.1.1 Item description. Data contained in the dash sheets provide adequate physical description and performance characteristics to permit selection of the item best suited for a specific application. Maximum dry weights are cited in the dash sheets. In addition, photographs and outlined drawings are included to facilitate application planning, including plans for mounting on trailers or other platforms.

5.1.2 Parametric Values. The parametric values cited within these dash sheets are the maximum allowable limits over the specified environmental range. Specified parametric values were determined using the test procedures delineated in MIL-STD-705, Generator Sets, Engine-Driven, Methods of Tests and Instructions. For a more complete description, see applicable specifications, drawings, and referenced documents.

5.2 Stock Numbers and Specifications. Mobile electric power generator set National Stock Numbers and Military Specifications are provided in Table II.

## 6. NOTES

6.1 Generator Set Availability. Users of this Standard are advised to contact the DOD Project Manager - Mobile Electric Power, 7500 Backlick Road, Springfield, Virginia 22150 (AV 354-2057/COM 703-664-2057) to determine the availability of desired generator sets and to assure proper and timely acquisition.

6.2 Mobile Electric Power Generating Source Development Program. A Mobile Electric Power Generating Source (MEPGS) development program is monitored by the DOD Project Manager - Mobile Electric Power. If users of this standard cannot find a suitable generator set within the DOD Mobile Electric Power Engine-Driven Generator Standard Family as presented in this Standard and its associated Dash Number Sheets, they are advised to contact the Project Manager (see Para 6.1) to obtain status of the development program.

6.3 International Standardization Agreement. Certain provisions of this document and associated Dash Number Sheets are the subject of international standardization agreements: ABCA QSTAG 298, ABCA QSTAG 299, NATO STANAG 4134, and NATO STANAG 4135. When change notice, revision, or cancellation of this

MIL-STD-633E  
22 February 1980

document is proposed which will affect or violate the international agreements concerned, the preparing activity shall take appropriate reconciliation action through international standardization channels, including departmental standardization offices, if required.

6.4 Army Type-Classification. Some generator sets included in this document have not been Type Classified for Army use and are identified by "Not Type Classified for Army Use" in the classification section of the Characteristics Data Sheets.

MILITARY STANDARD  
MOBILE ELECTRIC POWER  
ENGINE GENERATOR STANDARD FAMILY  
MEP-014A, 0.5 kW, 60 Hz, GASOLINE ENGINE-DRIVEN GENERATOR SET  
CHARACTERISTICS DATA SHEET

CLASSIFICATION

Description: 0.5 kW @ 1.0 power factor, 60 Hz, 120 V

Model:	MEP-014A	Type:	I (tactical)
NSN:	6115-00-923-4469	Class:	2 (utility)
Spec:	MIL-G-52732/1	Mode:	III (60 Hz)

PHYSICAL CHARACTERISTICS

Dimensions: See Figure 1 on page 22.

Weight: 85 lbs (38.6 kg).

Mobility: Mounted on skid base (tubular frame).

Engine: Gasoline. Standard: MS39297. Horsepower: 1.5 @ 3600 RPM. No. of cyl. 1. Cycle: 4. Air cooled. Rope Start. Operating speed: 3600 RPM. Fuel tank capacity: 1 gallon (4 hrs at rated load). Fuel pump lift: 3 feet.

Fuel:

Primary: MIL-G-3056 and VV-G-76 Automotive gasolines.  
Emergency fuel: MIL-G-5572, Grades 80/87, 100/130 and 115/145 Aviation gasolines.

Electrical:

Drip proof generator enclosure. Fungus and moisture treatment.  
Solid state voltage regulator. Brushless rotary exciter.

Voltage Connection: 60 Hz, 120 V: 2 wire, 1 phase.

MIL-STD-633E-1  
22 February 1980

FUNCTIONAL/OPERATIONAL CHARACTERISTICS

Reliability: Mean Time Between Failures (MTBF): 250 hours (specified)

Fuel Consumption: 0.25 gph at rated load

Electromagnetic Interference: Suppressed to MIL-STD-461 limits.

Description: 0.5 kW, 28 VDC

Model:	MEP-024A	Type:	I (tactical)
NSN:	6115-00-940-7867	Class:	2 (utility)
Spec:	MIL-G-52732/3	Mode:	IV (DC)

PHYSICAL CHARACTERISTICS

Dimensions: See Figure 3 on page 30.

Weight: 85 lbs (38.6 kg).

Mobility: Mounted on skid base (tubular frame).

Engine: Gasoline. Standard: MS39297. Horsepower: 1.5 @ 3600 RPM. No. of cyl 1. Cycle: 4. Air cooled. Rope start. Operating speed: 3600 RPM. Fuel tank capacity: 1 gallon (4 hrs at rated load). Fuel pump lift: 3 feet.

Fuel:

Primary: MIL-G-3056 and VV-G-76 Automotive gasolines.  
Emergency fuel: MIL-G-5572, Grade 80/87, 100/130 and 115/145 Aviation gasolines.

Electrical:

Drip proof generator enclosure. Fungus and moisture treatment.  
Solid state voltage regulator. Brushless rotary exciter.

Voltage Connection: 28 volts, 2 wire, DC.

Protective Devices: Overload protection. Short circuit protection.

Instrumentation: Voltmeter. Percent-of-load meter (ammeter).

MIL-STD-633E-3  
22 February 1980

FUNCTIONAL/OPERATIONAL CHARACTERISTICS

Reliability: Mean Time Between Failure (MTBF): 250 hours (specified)

Fuel Consumption: 0.25 gph at rated load.

Electromagnetic Interference: Suppressed to MIL-STD-461 limits.

	<u>Voltage</u>
<u>Steady State Stability (variation)</u>	
Short Term (30 see)	2% Bandwidth
Long Term (4 hours)	2% Bandwidth
<u>Transient Performance</u>	
Application of rated load recovery	30% Dip 2 Sec
Rejection of rated load recovery	40% Rise 2 Sec
<u>Regulation</u>	4 %
<u>DC Voltage Ripple</u>	5.5%
<u>Adjustment Range for Standard Voltage Connections:</u>	23 to 35 v @ +60° F to +85°F 26.6 to 29.4 V @ -25° F to +60° F +60° F and +85° F to +125° F

ENVIRONMENTAL DATA

Power Output at Environmental Conditions

0.5 kW, DC, Sea Level: Minus 25° F (-31.7° C) to plus 125° F (+51.7° C)

0.5 kW, DC, 5000 feet: Minus 25° F (-31.7° C) to Plus 107° F (+41.7° C)

0.5 kW, DC, 8000 feet: Minus 25° F (-31.7° C) to plus 95° F (+35.0° C)

Shock and Rough Handling: 10 mph railroad impact. 3 foot drop. Vibration.

Attitude: Operate with base level or inclined no more than 15 degrees from level.

Noise Level: 76 dbA @ 25 feet (estimate).

MILITARY STANDARD  
MOBILE ELECTRIC POWER  
ENGINE GENERATOR STANDARD FAMILY  
MEP-017A, 5 kW, 60 Hz, GASOLINE ENGINE-DRIVEN GENERATOR SET  
CHARACTERISTICS DATA SHEET

CLASSIFICATION

Description: 5 kW @ 0.8 power factor, 60 Hz, 120 V, 240 V, 120/208 V.

Model:	MEP-017A	Type:	I (tactical)
NSN:	6115-00-017-8240	Class:	2 (utility)
Spec:	MIL-G-52732/9	Mode:	III (60 Hz)

PHYSICAL CHARACTERISTICS

Dimensions: See Figure 9 on page 54.

Weight: 488 lbs (221.4 kg).

Mobility: Mounted on skid base (tubular frame). Lifting and tie-down attachment provided.

Engine: Gasoline. Standard: MS39300. Horsepower: 10 @ 3600 RPM. NO. Of cyl: 2. Cycle: 4. Air cooled. Rope and 24 VDC electric start. Operating speed: 3600 RPM. Fuel tank capacity: 5 gallon (approx 3.5 hrs at rated load). Fuel pump lift: 6 ft.

Fuel:

Primary: MIL-G-3056 and VV-G-76 Automotive gasoline.  
Emergency fuel: MIL-G-5572, Grades 80/87, 100/130 and 115/145 Aviation gasolines.

Electrical:

Drip proof generator enclosure. Fungus and moisture treatment.  
Solid state voltage regulator. Brushless rotary exciter.

Voltage Connection: 120 V, 2 wire, 1 phase. 240 V, 2 wire, 1 phase.  
120 V, 3 wire, 3 phase. 120/208 V, 4 wire, 3 phase.

MIL-STD-633E-9  
22 February 1980

Protective Devices: Short circuit protection. Low oil pressure cut-off switch.

Instrumentation: Voltmeter. Frequency meter. Percent-of-load meter (current).  
Hourmeter. Oil pressure gage. Battery charging ammeter.

#### FUNCTIONAL/OPERATIONAL CHARACTERISTICS

Reliability: Mean Time Between Failures (MTBF): 250 hours (specified)

Fuel Consumption: 1.4 gph at rated load.

Electromagnetic Interference: Suppressed to MIL-STD-461 limits.

	<u>Voltage</u>	<u>Frequency</u>
<u>Steady State Stability (variation)</u>		
Short Term (30 see)	2% Bandwidth	1% Bandwidth
Long Term (4 hours)	2% Bandwidth	2% Bandwidth
<u>Transient Performance</u>		
Application of rated load recovery	30% Dip 2 Sec	3% Undershoot 4 Sec
Rejection of rated load recovery	30% Rise 2 Sec	5% Overshoot 6 Sec
<u>Waveform</u>		
Maximum Deviation factor (single phase)	6%	
(three phase)	5%	
Individual Harmonic (single phase)	3%	
(three phase)	3%	
<u>Regulation</u> :	4%	3%
(for 240 V, 2 wire connection)	5%	3%

#### Adjustment Range for Standard Voltage Connections

120/208 v Corm: 197 to 218 V. 240 V Corm: 228 to 252 V.

120 V, 1 phase Corm: 114 to 126 V. 120 V, 3 phase Conn: 114 to 126 v.

Frequency Adjustment Ranges: 60 Hz: N/A

#### ENVIRONMENTAL DATA

##### Power Output at Environmental Conditions

5 kW, 60 Hz, Sea Level: Minus 25° F (-31.7° C) to Plus 125° F (+51.7° C)

5 kW, 60 Hz, 5000 feet: Minus 25° F (-31.7° C) to Plus 107° F (+41.7° C)

5 kW, 60 Hz, 8000 feet: Minus 25° F (-31.7° C) to Plus 95° F (+35.0° C)

Winterization system extends lower temperature limit to -65° F (-53.9° C).

MIL-STD-633E-9  
22 February 1980

Shock and Rough Handling: 10 mph railroad impact. 3 foot drop. Vibration.

Attitude: Operate with base level or inclined no more than 15 degrees from level.

Noise Level: 82 dbA @ 25 feet.

OPTIONAL EQUIPMENT

See 4.4.1 of MIL-STD-633 for additional information on optional equipment.

MILITARY STANDARD  
MOBILE ELECTRIC POWER  
ENGINE GENERATOR STANDARD FAMILY  
MEP-412A, 10 kW, 60 Hz, GAS TURBINE ENGINE-DRIVEN GENERATOR SET  
CHARACTERISTICS DATA SHEET

CLASSIFICATION

Description: 10 kW @ 0.8 power factor, 60 Hz, 120 V, 120/240 V, 120/208 v  
Not type classified for Army use.

Model:	MEP-412A	Type:	I (tactical)
NSN:	To be determined	Class:	2 (utility)
Spec:	PD 10 Aug 78	Mode:	III (60 Hz)

PHYSICAL CHARACTERISTICS

Dimensions: See Figures 16 and 17 on pages 76 and 77.

Weight: 456 lbs (206.8 kg).

Mobility: Mounted on skid base. Lifting, and tie-down attachments provided.  
Towing provision.

Engine: Gas turbine. Horsepower: 28 @ 93,500 RPM. Air cooled. 24 VDC  
electric start. Operating speed: 93,500 RPM/with gear reduction to 3600.  
Internal fuel tank: 4 minutes operation. Fuel pump lift: 6 feet. Auxiliary  
fuel hose: 12 feet.

Fuel:

Primary: MIL-T-5624 Aviation Turbine Fuels, grades JP-4 and JP-5. VV-F-800,  
Diesel Fuel Oil, types DF-1, DF-2 and DF-A and MIL-F-16884, Marine  
Diesel Fuel Oil.

Emergency fuel: MIL-G-3056 and VV-G-76 Automotive Gasolines and MIL-G-5572  
Aviation Gasolines. Grades 80/87, 100/130 and 115/145.

Electrical Data: Fungus and moisture treatment. Solid state voltage regulator.  
Brushless rotary exciter.

Voltage Connection: 120 V, 1 phase, 2 wire. 120/240 V, 1 phase 3 wire,  
120/208 V, 3 phase 4 wire.

MIL-STD-633E-14  
22 February 1980

Protective Devices: Short circuit protection. Overload. Engine overspeed and exhaust temperature protection. Low oil pressure cut-off switch. Low fuel (4 minutes operation). Malfunction indicator for each protective device.

Instrumentation: Voltmeter. Ammeter. Hourmeter. Frequency Meter.

#### FUNCTIONAL/OPERATIONAL CHARACTERISTICS

Reliability: Mean Time Between Failures (MTBF): 750 hours (specified)

Fuel Consumption: 3.4 gph at rated load.

Electromagnetic Interference: Suppressed to MIL-STD-461 limits.

	<u>Voltage</u>	<u>Frequency</u>
<u>Steady State Stability (variation)</u>		
Short Term (30 see)	2% Bandwidth	2% Bandwidth

CHARACTERISTICS DATA SHEET

CLASSIFICATION

Description: 10 kW, 28 VDC  
Not type classified for Army use.

Model:	MEP-414A	Type:	I (tactical)
NSN:	6115-00-149-0761	Class:	2 (utility)
Spec:	PD 20 Mar 74	Mode:	IV (DC)

PHYSICAL CHARACTERISTICS

Dimensions: See Figures 21 and 22 on pages 91 and 92.

Weight: 300 lbs (136.1 kg).

Mobility: Mounted on skid base. Lifting and tie-down attachments provided.

Engine: Gas turbine. Horsepower: 28 @ 93,500 RPM. Air cooled. 24 VDC electric start. Operating speed: 93,500 RPM. Internal fuel tank: 3 minutes operation. Fuel pump lift: 6 feet. Auxiliary fuel hose: 12 feet.

Fuel:

Primary: MIL-T-5624 Aviation Turbine Fuels, grades JP-4 and JP-5. VV-F-800, Diesel Fuel Oil, types DF-1, DF-2 and DF-A and MIL-F-16884, Marine Diesel Fuel Oil.

Emergency Fuel: MIL-G-3056 and VV-G-76 Automotive Gasolines and MIL-G-5572 Aviation Gasolines. Grades 80/87, 100/130, and 115/145.

Electrical Data:

Generator: Solid rotor, 2 pole, Lundell (direct coupled to gas turbine).  
Transformer: 15 kVA, 6 phase, 3 primary coil, 3 center-taped secondary coil, step-down. Rectifier Bridge: 6 phase, full wave, inter-phase transformer connected (180 degrees conduction angle). Battery: MS75047 (4 HN) (24 V lead-acid). Remote control capability. Solid state voltage regulator. Solid state protection and control circuits.

Voltage Connection: 28 Volts, direct current.

MIL-STD-633E-17  
22 February 1980

Protective Devices: Short circuit protection. Power limit protection (adjustable, 9 kW to 15 kW mode). Current limit protection (switchable, 750 or 1000 amp mode). Engine overspeed and exhaust temperature protection. Low oil pressure cut-off switch.

Instrumentation: Voltmeter. Ammeter. Hourmeter.

#### FUNCTIONAL/OPERATIONAL CHARACTERISTICS

Reliability: Mean Time Between Failures (MTBF): 500 hours (specified).

Fuel Consumption. 3.4 gph at rated load.

Electromagnetic Interference: Suppressed to MIL-STD-461 limits.

MILITARY STANDARD  
MOBILE ELECTRIC POWER  
ENGINE GENERATOR STANDARD FAMILY  
MEP-103A, 15 kW, 50-60 Hz, DIESEL ENGINE-DRIVEN GENERATOR SET  
CHARACTERISTICS DATA SHEET

CLASSIFICATION

Description: 15 kW @ 0.8 power factor, 50/60 Hz, 120/208 V, 240/416 V

Model:	MEP-103A	Type:	I (tactical)
NSN:	6115-00-118-1245	Class:	I (precise)
Spec:	MIL-G-52884/1	Mode:	I (50/60 Hz)

PHYSICAL CHARACTERISTICS

Dimensions: See Figures 25 and 26 on pages 100 and 101.

Weight: 2450 lbs (1111.3 kg).

Mobility: Mounted on skid base. Lifting and tie-down attachments provided.  
Fork lift provision.

Engine: Diesel Std: MIL STD-1410. HorsePower: 41 @ 1800 RPM. No. of  
cycl: 4. Cycle: 4. Liquid cooled. 24 VDC electric start. Operating speed:  
50 Hz: 1500 RPM, 60 Hz: 1800 RPM. Fuel tank capacity: 15 gallons (approx  
8 hours at rated load). Fuel pump lift: 12 feet.

Fuel:

Primary: VV-F-800; Diesel Fuel Oil, types DF-1, DF-2 and DF-A.  
Emergency Fuel: MIL-T-5624, Aviation Turbine Fuels, grades JP-4 and JP-5.

Electrical:

Drip proof generator enclosure. Capable of parallel operation. Fungus and  
moisture treatment. Solid state voltage regulator. Brushless rotary  
exciter.

Voltage Connection: 60 Hz: 120/208 V, 3 phase, 4 wire. 240/416 V, 3 phase,  
4 wire. 50 Hz: 120/208 V, 3 phase, 4 wire. 240/416 V, 3 phase, 4 wire.

MIL-STD-633E-19  
22 February 1980

Protective Devices: Short circuit protection. Overvoltage protection. overload protection. Reverse power protection. Low oil pressure cut-off switch. High temperature cut-off switch. Low fuel level cut-off switch. Overspeed cut-off switch.

Instrumentation: Voltmeter. Frequency meter. Ammeter. Hourmeter. Wattmeter (% load). Oil pressure gage. Battery charging ammeter (% current). Fault indicating system. Temperature indicator. Fuel level.

#### FUNCTIONAL/OPERATIONAL CHARACTERISTICS

Reliability: Mean Time Between Failures (MTBF): 370 hours (specified).

Fuel Consumption: 1.5 gph at rated load.

Electromagnetic Interference: Suppression to MIL-STD-461 limits.

	<u>Voltage</u>	<u>Frequency</u>
<u>Steady State Stability (variation)</u>		
Short Term (30 see)	1% Bandwidth	0.5% Bandwidth
Long Term (4 hours)	2% Bandwidth	1% Bandwidth
<u>Transient Performance</u>		
Application of rated load	15% Dip	1.5% Undershoot
recovery	0.5 Sec	1 Sec
Rejection of rated load	15% Rise	1.5% Overshoot
recovery	0.5 Sec	1 Sec
Application of simulated motor load	30% Dip	
recovery	0.7% Sec	
<u>Waveform</u>		
Maximum Deviation Factor	5 %	
Individual Harmonic	2 %	
<u>Regulation</u>	1%	0.25%

#### Adjustment Range for Standard Voltage Connections

120/208 V Corm: 60 Hz: 197 to 240 V 50 Hz: 190 to 213 v.  
240/416 V Corm: 60 Hz: 395 to 480 V 50 Hz: 380 to 426 v.

Frequency Adjustment Range: 48 - 52 Hz. 58 - 62 Hz.

MIL-STD-633E-19  
22 February 1980

ENVIRONMENTAL DATA

Power Output at Environmental Conditions

15 kW, 60 Hz, Sea level: Minus 25° F (-31.7° C) to plus 125° F (+51.7° C)  
 15 kW, 60 Hz, 5000 feet: Minus 25° F (-31.7° C) to plus 107° F (+41.7° C)  
 12.5 kW, 50 Hz, Sea level: Minus 25° F (-31.7° C) to plus 125° F (+51.7° C)  
 12.5 kW, 50 Hz, 5000 feet: Minus 25° F (-31.7° C) to plus 107° F (+41.7° C)  
 Winterization system extends lower temperature limit to minus 65° F (-53.9° C)

Shock and Rough Handling: 10 mph railroad impact. 12 inch end drop. Truck and trailer transportation.

Attitude: Operate with base level or inclined no more than 15 degrees from level.

Noise level: 80 dbA @ 25 feet.

OPTIONAL EQUIPMENT

See 4.4.3 of MIL-STD-633 for additional information on optional equipment.

ENVIRONMENTAL DATA

Power Output at Environmental Conditions:

30 kW, 60 Hz, Sea level: Minus 25° F (-31.7° C) to plus 125° F (+51.7° C)  
30 kW, 60 Hz, 5000 feet: Minus 25° F (-31.7° C) to plus 107° F (+41.7° C)  
25 kW, 50 Hz, Sea level: Minus 25° F (-31.7° C) to plus 125° F (+51.7° C)  
25 kW, 50 Hz, 5000 feet: Minus 25° F (-31.7° C) to plus 107° F (+41.7° C)  
Winterization system extends lower temperature limit to minus 65° F (-53.9° C).

Shock and Rough Handling: 10 mph railroad impact. 12 inch end drop. Truck and trailer transportation.

Attitude: Operate with base level or inclined no more than 15 degrees from level.

Noise Level: 82 dbA @ 25 feet.

OPTIONAL EQUIPMENT

See 4.4.3 of MIL-STD-633 for additional information on optional equipment.

MILITARY STANDARD  
MOBILE ELECTRIC POWER  
ENGINE GENERATOR STANDARD FAMILY  
MEP-114A, 30 kW, 400 Hz, DIESEL ENGINE-DRIVEN GENERATOR SET  
CHARACTERISTICS DATA SHEET

CLASSIFICATION

Description: 30 kW @ 0.8 power factor, 400 Hz, 120/208 V, 240/416 V

Model:	MEP-114A	Type:	I (tactical)
NSN:	6115-00-118-1248	Class:	1 (precise)
Spec:	MIL-G-52884/6	Mode:	II (400 Hz)

PHYSICAL CHARACTERISTICS

Dimensions: See Figures 33 and 34 on pages 120 and 121.

Weight: 3000 lbs (1360.8 kg).

Mobility: Fully housed. Mounted on skid base. Lifting and tie-down attachments provided. Fork lift provision.

Engine: Diesel. Std: MIL-STD-1410. Horsepower: 64 @ 2000 RPM. No. of cylinders: 6. Cycle: 4. Liquid cooled. 24 VDC electric start. Operating speed: 400 Hz: 2000 RPM. Fuel tank capacity: 26 gallons (approx 8 hours at rated load). Fuel pump lift: 12 feet.

Fuel:

Primary: VV-F-800; Diesel Fuel Oil, types DF-1, DF-2 and DF-A.  
Emergency Fuel: MIL-T-5624, Aviation Turbine Fuels, grades JP-4 and JP-5.

Electrical:

Drip proof generator enclosure. Capable of parallel operation. Fungus and moisture treatment. Solid state voltage regulator. Brushless rotary exciter.

Voltage Connection:

400 Hz: 120/208 V, 3 phase, 4 wire. 240/416 V, 3 phase, 4 wire.

MIL-STD-633E-22  
22 February 1980

Protective Devices: Short circuit protection Overvoltage protection.  
Overload protection Reverse power protection Low oil pressure cut-off  
switch. High temperature cut-off switch Low fuel level cut-off switch.  
Overspeed cut-off switch.

Instrumentation: Voltmeter. Frequency meter Ammeter. Hourmeter. Wattmeter  
(% load). Oil pressure gage. Battery charging ammeter (% current Fault  
indicating system Coolant temperature indicator Fuel level.

#### FUNCTIONAL/OPERATIONAL CHARACTERISTICS

Reliability: Mean Time Between Failure (MTBF) 370 hours (specified).

Fuel Consumption: 3 gph at rated load.

Electromagnetic Interference suppression to MIL-STD-461 limits.

	<u>Voltage</u>	<u>Frequency</u>
<u>Steady State Stability (variation)</u>		
Short Term (30 see)	1% Bandwidth	0.5% Bandwidth
Long Term (4 hours)	2% Bandwidth	1% Bandwidth

<u>Transient Performance</u>		
Application of rated load	12% Dip	1.5% Undershoot
recovery	0.5 Sec	1 Sec
Rejection of rated load	12% Rise	1.5% Overshoot
recovery	0.5 Sec	1 Sec
Application of simulated motor load	25% Dip	
recovery	0.7 Sec	

<u>Waveform</u>	
Maximum Deviation Factor	5%
Individual Harmonic	2%

<u>Regulation</u>	1%	0.25%
-------------------	----	-------

#### Adjustment Range for Standard Voltage Connections

120/208 v Corm: 60 Hz: 197 to 229 V.  
240/416 V Corm: 60 Hz: 395 to 458 V.

Frequency Adjustment Range: 390 to 420 Hz.

ENVIRONMENTAL DATAPower Output at Environmental Conditions:

30 kW, 400 Hz, Sea level: Minus 25° F (-31.7° C) to plus 125° F (+51.7° C)  
 30 kW, 400 HZ, 5000 feet: Minus 25° F (-31.7° C) to plus 107° F (+41.7° C)  
 Winterization system extends lower temperature limit to -65° F (-53.9° C).

Shock and Rough Handling: 10 mph railroad impact. 12 inch end drop. Truck and trailer transportation.

Attitude: Operate with base level or inclined no more than 15 degrees from level.

Noise Level: 82 dbA @ 25 feet.

#### Adjustment Range for Standard Voltage Connections

120/208 v Corm: 400 Hz: 197 to 229 V.  
240/416 V Corm: 400 Hz: 395 to 458 v.

Frequency Adjustment Range: 390 to 420 Hz.

MIL-STD-633E-26  
22 February 1980

#### ENVIRONMENTAL DATA

##### Power Output at Environmental Conditions:

60 kW, 400 Hz, Sea Level: Minus 25° F (-31.7° C) to plus 125° F (+51.7° C)  
60 kW, 400 Hz, 5000 feet: Minus 25° F (-31.7° C) to plus 107° F (+41.7° C)  
Winterization system extends lower temperature limit to minus 65° F (-53.9° C)

Shock and Rough Handling: 10 mph railroad impact. 12 inch end drop. Truck and trailer transportation.

Attitude: Operate with base level or inclined no more than 15 degrees from level.

Noise Level: 90 dbA @ 25 feet.

#### OPTIONAL EQUIPMENT

See 4.4.3 of MIL-STD-633 for additional information on optional equipment.

<u>Description</u>	<u>NSN</u>	<u>Weight lbs (kg)</u>	<u>Effect on Dim (ins)</u>

MILITARY STANDARD  
MOBILE ELECTRIC POWER  
ENGINE GENERATOR STANDARD FAMILY  
MEP-404A, 60 kW, 400 Hz, GAS TURBINE ENGINE-DRIVEN GENERATOR SET  
CHARACTERISTICS DATA SHEET

CLASSIFICATION

Description: 60 kW @ 0.8 power factor, 400 Hz, 120/208 V, 240/416 V  
Not type classified for Army use.

Model:	MEP-404A	Type:	I (tactical)
NSN:	6115-00-126-3024	Class:	1 (precise)
Spec:	MIL-G-83380	Mode:	II (400 Hz)

PHYSICAL CHARACTERISTICS

Dimensions: See Figures 41 and 42 on pages 140 and 141.

Weight: 950 lbs (431 kg).

Mobility: Fully housed, mounted on skid base. Lifting and tie-down attachments provided. Forklift provisions.

Engine: Gas turbine. Horsepower: 90 @ 61,091 RPM. Air cooled. 24 VDC electric start. Operating speed: 61,091 RPM/with gear reduction to 6000. Internal fuel tank: 3 minutes operation. Fuel pump lift: 12 feet. Auxiliary fuel hose: 12 feet. Self cleaning engine air filter.

Fuel:

Primary: MIL-T-5624 Aviation Turbine Fuels, grades JP-4 and JP-5.  
VV-F-800, Diesel Fuel Oil, types DF-1, DF-2 and DF-A and  
MIL-F-16884, Marine Diesel Fuel Oil.

Emergency Fuel: MIL-G-3056 and VV-G-76 Automotive Gasolines and  
MIL-G-5572 Aviation Gasolines, grades 80/87, 100/130 and  
115/145.

Electrical Data: Fungus and moisture treatment. Solid state voltage regulator. Brushless rotary exciter. Nickel-Cadmium batteries. Capable of parallel operation. Remote control capability.

MIL-STD-633E-27  
22 February 1980

Voltage Connection: 120/208 V, 3 phase, 4 wire. 240/416 V, 3 phase, 4 wire.

Protective Devices: Short circuit protection. Overload. Reverse power protection. Under voltage protection. Over voltage protection. Under frequency protection. Engine overspeed and exhaust temperature protection. Low oil pressure cut-off switch. Low fuel (3 minutes operation). Malfunction indicator for each protective device.

Instrumentation: Voltmeter. Ammeter. Hourmeter. Frequency Meter. Wattmeter. Synchronization lights. Turbine exhaust gas temperature gage. Battery charging meter. Turbine speed indicator.

#### FUNCTIONAL/OPERATIONAL CHARACTERISTICS

Reliability: Mean Time Between Failures (MTBF): 1500 hours (specified).

Fuel Consumption: 17 gph at rated load.

Electromagnetic Interference: Suppressed to MIL-STD-461 limits.

<u>Steady State Stability (variation)</u>	<u>Voltage</u>	<u>Frequency</u>
Short Term (30 see)	0.5% Bandwidth	0.25% Bandwidth
Long Term (4 hours)	0.5% Bandwidth	0.25% Bandwidth
<u>Transient Performance</u>		
Application of rated load	15% Dip	1.5% Undershoot
recovery	0.1 Sec	1 Sec
Rejection of rated load	15% Rise	1.5% Overshoot
recovery	0.1 Sec	1 Sec
Application of simulated motor load	30% Dip	
recovery	0.15% Sec	
<u>Waveform</u>		
Maximum Deviation Factor	5%	
Individual Harmonic	1.5%	
<u>Regulation</u>	0.975%	3% (Droop) 0.25% (Isochronous)

#### Adjustment Range for Standard Voltage Connections:

120/208 V Corm: 197 to 229 V.  
240/416 V Corm: 395 to 458 V.

Adjustment Range for Frequency: 384 to 416 Hz.

MIL-STD-633E-27  
22 February 1980

ENVIRONMENTAL DATA

Power Output at Environmental Conditions

60 kW, 400 Hz, Sea Level: Minus 65° F (-53.9° C) to plus 125° F (+51.7° C)  
60 kW, 400 Hz, 5000 feet: Minus 65° F (-53.9° C) to plus 107° F (+41.7° C)  
54 kW, 400 Hz, 8000 feet: Minus 65° F (-53.9° C) to plus 95° F (+35° C)

Shock and Rough Handling: 10 mph railroad impact. 18 inch drop. 18 inch end drop. Truck and trailer transportation.

Attitude: Operate with base level or inclined no more than 15 degrees from level.

Noise Level: 85 dbA @ 25 feet.

OPTIONAL EQUIPMENT

None.

MILITARY STANDARD  
MOBILE ELECTRIC POWER  
ENGINE GENERATOR STANDARD FAMILY  
MEP-356A, 60 kW, 400 Hz, GAS TURBINE ENGINE-DRIVEN GENERATOR SET  
CHARACTERISTICS DATA SHEET

CLASSIFICATION

Description: 60 kW @ 0.8 power factor, 400 Hz, 115/200 V, 28 VDC, bleed air. Aircraft ground support power unit. Not type classified for Army use.

Model:	MEP-356A	Type:	I (tactical)
NSN:	6115-00-420-8486	Class:	1 (precise)
Spec:	MIL-G-38195	Mode:	II (400 Hz)

PHYSICAL CHARACTERISTICS

Dimensions: 90 in x 67 in x 67 in. See Figures 43 and 44 on pages 145 and 146.

Weight: 2800 lbs (1270 kg).

Mobility: Fully housed. Mobile, electric self-propelled. Trailer mounted. Lifting and tie-down attachments provided.

Engine: Gas turbine. Horsepower: 177 @ 42,000 RPM. 24 VDC electric start. Operating speed: 400 Hz: 42,000 RPM. Fuel tank capacity: 190 gallons (approx 6.5 hours at average load). Fuel pump lift: 6 feet.

Fuel:

Primary: MIL-T-5624, Aviation Turbine Fuels, grades JP-4 and JP-5.

Separate AC, brushless rotary exciter.

Voltage Connection: 400 Hz: 115/200 V, 3 phase, 4 wire. DC: 28 v, 2 wire.

Protective Devices: Short circuit protection. AC overvoltage/undervoltage protection. AC underfrequency protection. Overspeed protection. Low oil pressure cut-off switch. High temperature control.

Instrumentation: AC Voltmeter. DC Voltmeter. Frequency meter. Hourmeter. Battery charging ammeter and voltmeter. Fuel level. Tachometer.

MIL-STD-533E-28  
22 February 1980

Reliability: Mean Time Between Failures (MTBF): 478 hours (specified).

Fuel Consumption: 33 gph at rated load. 41 gph with bleed air.

<u>Steady State Stability (variation)</u>	<u>Voltage</u>	<u>Frequency</u>
Short Term (30 see)	N/R	0.5% Bandwidth
Long Term (4 hours)	N/R	N/R
<u>Transient Performance</u>		
Application of rated load	25% Dip	1% Undershoot
recovery	0.25 Sec	0.4 Sec
Rejection of rated load	25% Rise	0.25% Overshoot
recovery	0.25 Sec	1.5 Sec
Application of simulated motor load	N/A	
recovery	N/A	

Waveform

Maximum Deviation Factor	N/R
Individual Harmonic	2%

Adjustment Range for Standard Voltage Connections: N/A

Frequency Adjustment Range: 380 to 420 HZ.

DC Power: DC power used only for propulsion and utility. No DC power available for aircraft servicing.

Pneumatic (Bleed Air): Flow rate: 150 + 4 pounds per minute. Air pressure: 51± 2 psia. Delivery air temperature: 385° F (minimum).

ENVIRONMENTAL DATA

Power Output at Environmental Conditions:

Winterization system extends lower temperature limit to minus 65° F (-53.9° C).

Shock and Rough Handling: Vibration. 12 inch end drop.

Attitude: Operate with base level or inclined no more than 15 degrees from level.

Noise level: 93 dbA @ 25 feet (estimate).

MIL-STD-633E-28  
22 February 1980

Auxiliary Equipment: 28 VDC slave receptacle (AN 2552). Battery charging rectifier, 28 VDC and 400 Hz AC convenience receptacles. 60 foot MS25486 AC power output cable.

OPTIONAL EQUIPMENT

None.

MILITARY STANDARD  
MOBILE ELECTRIC POWER  
ENGINE GENERATOR STANDARD FAMILY  
MEP-357A, 72 kW, 400 Hz, 21 kW, DC DIESEL ENGINE-DRIVEN GENERATOR SET  
CHARACTERISTICS DATA SHEET

CLASSIFICATION

Description: 72 kw @ 0.8 power factor, 400 Hz, 115/200 V. 21 kW, 28 VDC.  
Aircraft ground support power unit. Not type classified for Army use.

Model:	MEP-357A	Type:	I (tactical)
NSN:	6115-00-110-1859	Class:	1 (precise)
Spec:	PD 328AS100	Mode:	II (400 Hz)/IV (DC)

PHYSICAL CHARACTERISTICS

Dimensions: See Figures 45 and 46 on pages 150 and 151.

Weight: 7000 lbs (3175 kg).

Mobility: Fully enclosed. Integral trailer mounted. Lifting and tie-down attachments provided.

Engine: Diesel. Std: MIL-STD-1410. Horsepower: 215<sup>5</sup> 1846 RPM. No. of  
cyl: 6. 2. Liquid cooled. 24 VDC electric start. Operating speed:  
1846 RPM. Fuel tank capacity: 30 gallons (approx 4 hours at rated load).  
Fuel pump lift: 1 foot.

Fuel:

Primary: VV-F-800; Diesel Fuel Oil, types DF-1, DF-2 and DF-A, and MIL-F-16884  
Marine diesel fuel oil.  
Emergency Fuel: MIL-T-5624, Aviation Turbine Fuel, grade JP-5.

Electrical:

Drip proof generator enclosure. Fungus and moisture treatment.  
Solid state voltage regulator. Static exciter generator. DC power  
supply with 750 and 1000 ampere current limit.

Voltage Connection: 400 Hz: 115/200 V, 3 phase, 4 wire. DC: 28 V, 2 wire.

MIL-STD-633E-29  
22 February 1980

Protective Devices: Low fuel level. High coolant temperature. DC output overvoltage. AC output over/under voltage. Frequency output over/under. Engine overspeed. Low oil pressure. Fault indicator system for the above. Magnetic and thermal overload protection.

Instrumentation: AC and DC Voltmeters. Frequency meter. AC and DC Ammeters. Hourmeter. Oil pressure gage. Battery voltmeter. Fault indicating system. Coolant temperature gage. Fuel level. Tachometer.

#### FUNCTIONAL/OPERATIONAL CHARACTERISTICS

Reliability: Mean Time Between Failures (MTBF); 250 hours (specified).

Fuel Consumption: 6.7 gph at rated load.

Electromagnetic Interference: Suppression to MIL-STD-461 limits.

#### Adjustment Range for Standard Voltage Connections

115/200 V Corm: 400 Hz: 105 to 125 V.  
28 VDC Corm: 23 to 35 V.

Frequency Adjustment Range: 380 to 440 Hz.

MIL-STD-633E-29  
22 February 1980

ENVIRONMENTAL DATA

Power Output at Environmental Conditions:

60 kW, 400 Hz, Sea Level: Minus 25° F (-31.7° C) to plus 125° F (+51.7° C)  
Winterization system extends lower temperature limit to minus 65° F (-53.9° C).

Shock and Rough Handling: Drop. Vibration test.

Attitude: Operate with base level or inclined no more than 15 degrees from level.

Noise level: 87 dbA @ 25 feet.

AUXILIARY EQUIPMENT

24 VDC slave receptacle. 28 VDC and 400 Hz convenience receptacles. Two  
30 foot MS90328-14 AC power output cables. Cold weather ether start injection  
system. Test jack for AN/USM-108 test set.

OPTIONAL EQUIPMENT

See 4.3.1 for information on fire extinguisher.

SPECIAL FEATURES

AC and DC power cable retracting reels. Mechanical parking brake. Running  
lights.

#### Adjustment Range for Standard Voltage Connections

120/208 v Corm:	400 Hz:	197 to 229 V.
240/416 V Corm:	400 Hz:	395 to 458 V.

Frequency Adjustment Range: 385 to 415 Hz.

MIL-STD-533E-31  
22 February 1980

ENVIRONMENTAL DATA

Power Output at Environmental Conditions:

100 kW, 400 Hz, Sea Level: Minus 25° F (-31.7° C) to plus 125° F (+51.7° C)  
100 kW, 400 Hz, 5000 feet: Minus 25° F (-31.7° C) to plus 107° F (+41.7° C)  
Winterization system extends lower temperature limit to minus 65° F (-53.9° C)

Shock and Rough Handling: 10 mph railroad impact. 12 inch end drop. Truck and trailer transportation.

Attitude: Operate with base level or inclined no more than 15 degrees from level.

Noise Level: 91 dbA @ 25 feet.

OPTIONAL EQUIPMENT

See 4.4.3 of MIL-STD-633 for additional information on optional equipment.

MILITARY STANDARD  
MOBILE ELECTRIC POWER  
ENGINE GENERATOR STANDARD FAMILY  
MEP-009B, 200 kW, 50-60 Hz, DIESEL ENGINE-DRIVEN GENERATOR SET  
CHARACTERISTICS DATA SHEET

CLASSIFICATION

Description: 200 kW @ 0.8 power factor, 50/60 Hz, 120/208 V, 240/416 V.

Model:	MEP-009B	Type:	I (tactical)
NSN:	6115-01-021-4096	Class:	
Spec:		Mode:	I (50/60 Hz)

PHYSICAL CHARACTERISTICS

Dimensions: See Figures 51 and 52 on pages 165 and 166.

Weight: 10,500 lbs (4770 kg).

Mobility: Fully housed. Mounted on skid base. Lifting and tie-down attachments provided. Fork lift provision.

Engine: Diesel. Std: MIL-STD-1410. Horsepower: 340 (min) <sup>e</sup> 1800 RPM. No. of cyl: 6. Cycle: 4. Liquid cooled. 24 VDC electric start. Operating speed: 50 Hz: 1500 RPM, 60 Hz: 1800 RPM. Fuel tank capacity: To provide 8 hours operation at rated load. Fuel pump lift: 12 feet.

Fuel:

Primary: VV-F-800; Diesel Fuel Oil, types DF-1, DF-2 and DF-A, and MIL-F-16884; Marine Diesel Fuel Oil.

Emergency Fuel: MIL-T-5624, Aviation Turbine Fuels, grades JP-4 and JP-5.

Electrical:

Drip proof generator enclosure. Capable of parallel operation. Fungus and moisture treatment. Solid state voltage regulator. Brushless rotary exciter.

Voltage Connection:

60 Hz:	120/208 V, 3 phase, 4 wire.	240/416 V, 3 phase, 4 wire.
50 Hz:	120/208 v, 3 phase, 4 wire.	240/416 V, 3 phase, 4 wire.

MIL-STD-633E-32  
22 February 1980

Protective Devices: Short circuit protection. Overvoltage protection. Overload protection. Reverse power protection. Low oil pressure cut-off switch. High temperature cut-off switch. Low fuel level cut-off switch. Overspeed cut-off switch.

Instrumentation: Voltmeter. Frequency meter. Ammeter. Hourmeter. Wattmeter (% load). Oil pressure gage. Battery charging ammeter (% current). Fault indicating system. Coolant temperature indicator. Fuel level.

#### FUNCTIONAL / OPERATIONAL CHARACTERISTICS

Reliability: Mean Time Between Failures (MTBF): 468 hours (specified).

Fuel Consumption: 16 gph at rated load.

Electromagnetic Interference: Suppression to MIL-STD-461 limits.

	<u>Voltage</u>	<u>Frequency</u>
<u>Steady State Stability (variation)</u>		
Short Term (30 see)	1% Bandwidth	0.5% Bandwidth
Long Term (4 hours)	2% Bandwidth	1% Bandwidth

CHARACTERISTICS DATA SHEET

CLASSIFICATION

Description: 500 kW @ 0.8 power factor, 50/60 Hz, 120/208 v, 240/416 v.

Model:	MEP-029A	Type:	I (tactical)
NSN:	6115-01-030-6085	Class:	2 (utility)
Spec:	MIL-G-52880	Mode:	I (50/60 Hz)

PHYSICAL CHARACTERISTICS

Dimensions: L=219", W=88", H=120" See Figures 53 and 54 on pages 173 and 174.

Weight: 34,050 lbs (15,445 kg).

Mobility: Unhoused. Mounted on skid base. Lifting and tie-down attachments provided. Air transportable.

Engine: Diesel Std: MIL-STD-1410. Horsepower: 830 @ 1800 RPM. No. of cy: 12. cycle 4. Liquid cooled. 24 VDC electric start. Operating speed: 50 Hz: 1500 RPM, 60 Hz: 1800 RPM. Fuel tank capacity: 117 gallons (approx 3 hours at rated load). Fuel pump lift: 10 feet. Fuel transfer pump.

Fuel:

Primary: VV-F-800; Diesel Fuel Oil, Types DF-1, DF-2, and DF-A.  
Emergency Fuel: MIL-T-5624, Aviation Turbine Fuels, grade JP-5.

Electrical:

Drip proof generator enclosure. Capable of parallel operation. Fungus and moisture treatment. Solid state voltage regulator. Brushless rotary exciter. Circuit breaker.

Voltage Connection:

60 Hz: 120/208 V, 3 phase, 4 wire. 240/416 V, 3 phase, 4 wire.  
50 Hz: 120/208 V, 3 phase, 4 wire. 240/416 V, 3 phase, 4 wire.

Protective Devices: Overvoltage. Short circuit protection. Overload synchronizing check relay. Reverse power relay. Low oil pressure cut-off switch. High coolant temperature cut-off switch. Overspeed. Low fuel level. High oil temperature. Annunciator alarm system.

MIL-STD-633E-34  
22 February 1980

Instrumentation: Voltmeter. Frequency meter. Ammeter. Hourmeter. Kilo-wattmeter. Oil pressure gage. Oil temperature gage. Battery charging voltmeter. Coolant temperature gage. Fuel level. 50/60 Hz clock.

#### FUNCTIONAL/OPERATIONAL CHARACTERISTICS

Reliability: Mean Time Between Failures (MTBF): 500 hours (specified).

Fuel Consumption: 37 gph at rated load.

Electromagnetic Interference: Suppression to MIL-STD-461 limits.

<u>Steady State Stability (variation)</u>	<u>Voltage</u>	<u>Frequency</u>

MOBILE ELECTRIC POWER  
ENGINE GENERATOR STANDARD FAMILY  
MEP-208A, 750 kW, 50-60 Hz, DIESEL ENGINE-DRIVEN GENERATOR SET  
CHARACTERISTICS DATA SHEET

CLASSIFICATION

Description: 750 kW @ 0.8 power factor, 60 Hz: 2400/4160 V, 2400 V,  
50 Hz: 2200/3800 V, 2200 V.

Model:	MEP-208A	Type:	II (prime)
NSN:	6115-00-450-5881	Class:	2 (utility)
Spec:	MIL-G-82050	Mode:	I (50/60 Hz)

PHYSICAL CHARACTERISTICS

Dimensions: L=384", W=96", H=100". (Excluding the external exhaust system)

Weight: 40,000 lbs (18,144 kg).

Mobility: Fully housed. Mounted on skid base. Lifting and tie-down attachments provided.

Engine: Diesel. Spec: Commercial. Horsepower: 1050 (Cont) @ 720 RPM (max).  
No. of cyl:      Cycle:      Liquid cooled. Starting system: Comp. air (125-250  
psi). Operating speed: 50 Hz: 600 RPM (max), 60 Hz: 720 RPM (max). Fuel  
tank capacity: approx 8 hours operation at rated load. Fuel pump lift: 10  
feet. Engine preheat system: electric. Electric fuel transfer pump. Aux  
fuel hose: 24 feet. Air compressor (gasoline engine and electrical motor).  
Air storage tank.

Fuel:

Primary: VV-F-800; Diesel Fuel Oil, types DF-1, DF-2 and DF-A, and  
MIL-F-16884, Marine Diesel.  
Emergency Fuel: MIL-T-5624, Aviation Turbine Fuels, grades JP-4 and JP-5.

Electrical:

Drip proof generator enclosure. Capable of parallel operation. Fungus and  
moisture resistant. Solid state voltage regulator. Brushless rotary exciter.  
Circuit breaker. Cables: Outgoing power, 5 kv, 75 feet long, station power,  
600 V, 75 feet long.

Voltage Connection: 60 Hz: 2400/4160 V, 3 phase, 4 wire. 2400 V, 3 phase, 3 wire.  
50 Hz: 2200/3800 V, 3 phase, 4 wire. 2200 V, 3 phase, 3 wire.

MIL-STD-633E-35  
22 February 1980

Protective Devices: Over/under voltage protection. Under frequency. Overload. Short circuit protection. Reverse power relay. Low oil pressure cut-off switch. High temperature cut-off switch. Overspeed, low fuel level cut-off switch. Air pressure relief valve.

Instrumentation: Voltmeter. Frequency meter. Ammeter. Watt-hour meter. Synchroscope. Temperature gage (generator windings). Oil pressure gage. Oil temperature gage. Starting air pressure gage. Fault indicating system. Coolant temperature indicator. Fuel level. Fuel temperature. Air cleaner condition device. Engine running time. Electronic tachometer. Exhaust pyrometer.

#### FUNCTIONAL/OPERATIONAL CHARACTERISTICS

Reliability: Mean Time Between Failures (MTBF): 1200 hours (specified).

Fuel Consumption: Not available.

Electromagnetic Interference: Suppression to MIL-STD-461 limits when specified.

MILITARY STANDARD  
MOBILE ELECTRIC POWER  
ENGINE GENERATOR STANDARD FAMILY  
MEP-409A, 750 kW, 50/60 Hz, GAS TURBINE ENGINE-DRIVEN GENERATOR SET  
CHARACTERISTICS DATA SHEET

CLASSIFICATION

Description: 750 kW @ 0.8 power factor, 50/60 Hz, 2400/4160 V, 2400 V;  
2000/3460 V, 2000 V.

Model:	MEP-409A	Type:	II (prime)
NSN:	6115-00-450-5885	Class:	2 (utility)
Spec:	MIL-G-28670	Mode:	I (50/60 Hz)

PHYSICAL CHARACTERISTICS

Dimensions: L=474", W=95", H=114". See Figures 55 and 56 on pages 181 and 182.

Weight: 36,400 lbs (18,150 kg).

Mobility: Fully housed in van-type semi-trailer. Lifting and tie-down attachments provided.

Engine: Gas turbine. Horsepower: 1200 (cent) @ 22,300 RPM. 24 VDC electric start. Operating speed at output shaft: 60 Hz: 1800 RPM. 50 Hz: 1500 RPM. Fuel tank capacity: 500 gallons (approx 5 hours at rated load). Electric fuel transfer pump. 50 foot auxiliary fuel hose.

Fuel:

Primary: MIL-T-5624, Aviation Turbine Fuels, grades JP-4 and JP-5, MIL-F-16886 Marine Diesel Fuel Oil and VV-F-800 Diesel Fuel Oil grades DF-1, DF-2 and DF-A.

Emergency: Mil-G-3056 and VV-G-76 Automotive Gasoline, and MIL-G-5572 Aviation Gasoline, grades 80/87, 100/130 and 115/145.

Electrical:

Drip proof generator enclosure. Brushless, fungus and moisture resistant.

Capable of parallel operation.

Solid state voltage regulator. Circuit breaker.

Cables: Outgoing power 5 kV, 75 feet station power: 600 V, 75 feet.

Voltage Connection: 60 Hz: 2400/4160 V, 3 phase, 4 wire. 2400 V, 3 phase, 3 wire.  
50 Hz: 2000/3460 V, 3 phase, 4 wire. 2000 V, 3 phase, 3 wire.

MIL-STD-633E-36  
22 February 1980

Protective Devices: Overvoltage. Undervoltage. Underfrequency. Reverse power. Overcurrent (with instantaneous unit for short circuit protection). Low oil pressure. High oil temperature. High turbine temperature. Low fuel level. Ignition failure. Excessive vibration. Overspeed. Underspeed.

Instrumentation: Voltmeter, generator. Voltmeter, bus. Ammeter. Frequency meter. Kilowattmeter. Watthour meter. Synchroscope. Temperature indicator (generator windings). Power factor meter. Annunciator panel. Kilovarmeter. Turbine speed. Turbine temperature. Turbine exhaust temperature. Fuel level gage. Running time meter.

#### FUNCTIONAL/OPERATIONAL CHARACTERISTICS

Reliability: Mean Time Between Failures (MTBF): 1500 hours (specified).

Fuel Consumption: 96 gph at rated load.

Electromagnetic Interference: Suppression to MIL-STD-461 limits (when specified).

<u>Steady State Stability (variation)</u>	<u>Voltage</u>	<u>Frequency</u>
Short Term (30 Sec)	1% Bandwidth	0.5% Bandwidth
Long Term (4 hours)	2% Bandwidth	1% Bandwidth
<u>Transient Performance</u>		
Application of rated load	20% Dip	3% Undershoot
recovery	3 Sec	4 Sec
Rejection of rated load	30% Rise	4% Overshoot
recovery	3 Sec	4 Sec
Application of simulated motor load	N/A	
<u>Waveform</u>		
Maximum Deviation Factor	5%	
Individual Harmonic	2%	
<u>Regulation</u>	2%	0-5% Adjustable

#### Adjustment Range for Standard Voltage Connections:

60 Hz, 2400/4160 V: 3750 to 4575 V. 60 Hz, 2400 V: 2160 to 2640 V.  
50 Hz, 2000/3460 V: 3120 to 3813 V. 50 Hz, 2000 V: 1800 V to 2200 v.

Frequency Adjustment Range: 50 Hz: 48 - 52 Hz (rein). 60 Hz: 58 - 62 Hz (rein).

#### ENVIRONMENTAL DATA

##### Power Output at Environmental Conditions:

750 kW, 60 Hz: Sea level, 59° F (+15° C)  
577 kW, 60 Hz: 6000 feet, 90° F (+32.2° C)  
625 kW, 50 Hz: Sea level, 59° F (+15° C)  
501 kW, 50 Hz: 6000 feet, 90° F (+32.2° C)

##### Ambient temperature limits for operation:

Minus 25° F (-31.7° C) to plus 125° F (+51.7° C).

MIL-STD-633E-36  
22 February 1980

Shock and Rough Handling: 5 mph railroad impact.

Attitude: Operate with base level or inclined no more than 15 degrees from level.

Noise Level: 85 dbA @ 25 feet. 80 dbt in control compartment.

OPTIONAL EQUIPMENT

None.

Weight: 10,260 lbs (4654 kg).

Mobility: Fully housed. Mounted on skid base. Lifting and tie-down attachments provided. Fork lift provision.

Engine: Diesel, Std: MIL-STD-1410. Horsepower: 344 @ 1800 RPM. No. of cyl: 6. Cycle: 4. Liquid cooled. 24 VDC electric start. Operating speed: 50 Hz: 1500 RPM, 60 Hz: 1800 RPM. Fuel tank for 12 hours operation with a day tank. Fuel pump lift: 12 feet.

Fuel:  
Primary: VV-F-800; Diesel Fuel Oil, types DF-1, DF-2 and DF-A, and MIL-F-16884 Marine Diesel Fuel Oil.  
Emergency Fuel: MIL-T-5624, Aviation Turbine Fuels, grades JP-4 and JP-5.

Electrical:  
Drip proof generator enclosure. Capable of parallel operation. Fungus and moisture treatment.  
Solid state voltage regulator. Brushless rotary exciter.

Voltage Connection: 60 Hz: 120/208 V, 3 phase, 4 wire. 240/416 V, 3 phase, 4 wire.  
50 Hz: 120/208 V, 3 phase, 4 wire. 240/416 V, 3 phase, 4 wire.

MIL-STD-633E-40  
22 February 1980

Protective Devices: Short circuit protection. Overvoltage protection. Reverse power protection. Low oil pressure cut-off switch. High temperature cut-off switch. Low fuel level cut-off switch. Overspeed cut-off switch.

Instrumentation: Voltmeter. Frequency meter. Ammeter. Hourmeter. Wattmeter (% load). Oil pressure gage. Battery charging ammeter (% current). Fault indicating system. Coolant temperature indicator. Fuel level.

#### FUNCTIONAL/OPERATIONAL CHARACTERISTICS

Reliability: Mean Time Between Failures (MTBF): 520 hours (specified).

Fuel Consumption: 10 gph at rated load.

Electromagnetic Interference: Suppression to MIL-STD-461 limits.

<u>Steady State Stability (variation)</u>	<u>Voltage</u>	<u>Frequency</u>
Short Term (30 Sec)	2% Bandwidth	2% Bandwidth
Long Term (4 hours)	4% Bandwidth	3% Bandwidth
<u>Transient Performance</u>		
Application of rated load	20% Dip	3% Undershoot
recovery	3 Sec	3 Sec
Rejection of rated load	20% Rise	4% Overshoot
recovery	3 Sec	3 Sec
Application of simulated motor load	40% Dip	
recovery	5 Sec	
<u>Waveform</u>		
Maximum Deviation Factor	5%	
Individual Harmonic	2%	
<u>Regulation</u>	3%	2-3% Adjustable

#### Adjustment Range for Standard Voltage Connection

120/208 v Corm: 60 Hz: 197 to 240 V. 50 Hz: 190 to 213 v.  
240/416 V Corm: 60 Hz: 395 to 480 V. 50 Hz: 380 to 426 V.

Frequency Adjustment Range: Low idle to 2250 ± 25 RPM.

#### ENVIRONMENTAL DATA

##### Power Output at Environmental Conditions:

200 kW, 60 Hz: Sea level, minus 25° F (-31.7° C) to plus 125° F (+51.7° C)  
5000 feet, minus 25° F (-31.7° C) to plus 107° F (+41.7° C)  
167 kW, 50 Hz: Sea level, minus 25° F (-31.7° C) to Plus 125° F (+51.7° C)  
5000 feet, minus 25° F (-31.7° C) to plus 107° F (+41.7° C)

Winterization system extends lower temperature limit to minus 65° F (-53.9° C).

MIL-STD-633E-40  
22 February 1980

Shock and Rough Handling: 10 mph railroad impact. 12 inch end drop. Truck and trailer transportation.

Attitude: Operate with base level or inclined no more than 15 degrees from level.

Noise Level: 93 dbA @ 25 feet (estimate).

#### OPTIONAL EQUIPMENT

See 4.4.3 of MIL-STD-633 for additional information on optional equipment.

MILITARY STANDARD  
MOBILE ELECTRIC POWER  
ENGINE GENERATOR STANDARD FAMILY  
MEP-108A, 200 kW, 50-60 Hz, DIESEL ENGINE-DRIVEN GENERATOR SET  
CHARACTERISTICS DATA SHEET

CLASSIFICATION

Description: 200 kW @ 0.8 power factor, 50/60 Hz, 120/208 V, 240/416 V.

Model:	MEP-108A	Type:	I (tactical)
NSN:	6115-00-935-8729	Class:	1 (precise)
Spec:	MIL-G-52884/13	Mode:	I (50/50 Hz)

PHYSICAL CHARACTERISTICS

Dimensions: See Figures 65 and 66 on pages 206 and 2C

Weight: 10.350 lbs (4695 kg).

Mobility: Fully housed. Mounted on skid base. Lifting and tie-down attachments provided. Fork lift provision.

Engine: Diesel, Std: MIL-STD-1410 Horsepower: 344 @ 1800 RPM. No. of cyl: 6. Cycle: 4. Liquid cooled. 24 VDC electric start. Operating speed: 50 Hz: 1500 RPM, 60 Hz: 1800 RPM. Fuel tank for 12 hours operation with a day tank. Fuel pump lift: 12 feet.

Fuel:

Primary: VV-F-800; Diesel Fuel Oil, types DF-1, DF-2 and DF-A, and MIL-F-16884 Marine Diesel Fuel Oil.

Emergency Fuel: MIL-T-5624, Aviation Turbine Fuels, grades JP-4 and JP-5.

Electrical:

Drip proof generator enclosure. Capable of parallel operation. Fungus and moisture treatment.

Solid state voltage regulator. Brushless rotary exciter.

Voltage Connection: 60 Hz: 120/208 V, 3 phase, 4 wire. 240/416 V, 3 phase, 4 wire.  
50 Hz: 120/208 V, 3 phase, 4 wire. 240/416 V, 3 phase, 4 wire.

MIL-STD-633E-41  
22 February 1980

Protective Devices: Short circuit protection. Overvoltage protection. Reverse power protection. Low oil pressure cut-off switch. High temperature cut-off switch. Low fuel level cut-off switch. Overspeed cut-off switch.

Instrumentation: Voltmeter. Frequency meter. Ammeter. Hourmeter. Wattmeter (% load). Oil pressure gage. Battery charging ammeter (% current). Fault indicating system. Coolant temperature indicator. Fuel level.

#### FUNCTIONAL/OPERATIONAL CHARACTERISTICS

Reliability: Mean Time Between Failure (MTBF): 480 hours (specified).

Fuel Consumption: 16 gph at rated load.

Electromagnetic Interference: Suppression to MIL-STD-461 limits.

	<u>Voltage</u>	<u>Frequency</u>
<u>Steady State Stability (variation)</u>		
Short Term (30 Sec)	1% Bandwidth	0.5% Bandwidth
Long Term (4 hours)	2% Bandwidth	1% Bandwidth
<u>Transient Performance</u>		
Application of rated load	15% Dip	4% Undershoot
recovery	0.5 Sec	2 Sec
Rejection of rated load	15% Rise	4% Overshoot
recovery	0.5 Sec	2 Sec
Application of simulated motor load	30% Dip	
recovery	0.7 Sec	
<u>Waveform</u>		
Maximum Deviation Factor	5%	
Individual Harmonic	2%	
<u>Regulation</u>	1%	0.25%

#### Adjustment Range for Standard Voltage Connections:

120/208 v Corm: 60 Hz: 197 to 240 V. 50 Hz: 190 to 213 v.  
240/416 V Corm: 60 Hz: 395 to 480 V. 50 Hz: 380 to 426 V.

Frequency Adjustment Range: 58 to 62 Hz. 48 to 52 Hz.

#### ENVIRONMENTAL DATA

STANDARDIZATION DOCUMENT IMPROVEMENT PROPOSAL		OMB Approval No. 22-R255	
<p><b>INSTRUCTIONS:</b> The purpose of this form is to solicit beneficial comments which will help achieve procurement of suitable products at reasonable cost and minimum delay, or will otherwise enhance use of the document. DoD contractors, government activities, or manufacturers/vendors who are prospective suppliers of the product are invited to submit comments to the government. Fold on lines on reverse side, staple in corner, and send to preparing activity. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document(s) or to amend contractual requirements. Attach any pertinent data which may be of use in improving this document. If there are additional papers, attach to form and place both in an envelope addressed to preparing activity.</p>			
DOCUMENT IDENTIFIER AND TITLE MIL-STD-633E Mobile Electric Power Engine Generator Standard Family Gen Characteristics
